Mr. Jeff Loftus
Community Planning Manager
Gulf Regional Planning Commission
1635 Popp's Ferry Road, Suite G
Biloxi, MS 39532

Re: Traffic Analysis for Kiln Delisle Road at Kapalama Drive and Edwin Ladner Road

Dear Mr. Loftus:

Per your request, I conducted an analysis of the existing intersections along Kiln Delisle Road, north of I-10. Kapalama Drive at Kiln Delisle Road is in unincorporated Hancock County, while Edwin Ladner Road at Kiln Delisle Road is in Harrison County. This letter is intended to provide traffic analysis information regarding the increase in crashes at the Kapalama Drive/Kiln Delisle Road intersection and also evaluate the adjacent intersection of Edwin Ladner Road at Kiln Delisle Road. The Neco's XP gas station was recently constructed on the south side of Kiln Delisle Road between Kapalama Drive and Edwin Ladner Road. The locations of the study intersections are shown in **Figure 1-Vicinity Map**. The graphics referenced in this letter are provided as attachments.

Existing Conditions

A field inventory of the study intersections was conducted to document the existing conditions of the intersections and traffic control within the project limits. Kiln Delisle Road and Kapalama Drive are both classified as Major Collector routes for the Biloxi-Gulfport urbanized area. Edwin Ladner Road is not a classified roadway. The cross section of Kiln Delisle Road is 26 ft in width of asphalt with 2 ft shoulders and 11ft through lanes. The cross section of both Kapalama Drive and Edwin Ladner Road are both 22 ft wide with 11 ft through lanes.

Kapalama Drive at Kiln Delisle Road has a Stop sign with flashing red lights above the sign, along with an Intersection Ahead warning sign (W2-4) and Stop Ahead (W3-1). No "Stop" line exists and white striping is visible between opposing direction of travel lanes.

Above: Looking north on Kapalama Dr at Kiln Delisle Rd, and object markers. Marker on right is incorrect.
 Below: Looking south on Kapalama Drive at object makers and centerline white striping on 2-way traffic. Marker on left is incorrect.

Object markers are placed on the right and left sides of Kapalama Drive in both directions. The OM3-R signs are on the left side and right side for northbound traffic, and OM3-L signs on both sides facing southbound. There should be one OM3-R and one OM3-L in each direction. The signs have diagonal lines that identify which side of the sign a vehicle is supposed to pass on. The north Neco's site driveway on Kapalama Drive is ± 56 ft wide, the south driveway is ± 65 ft wide and the driveways are spaced ± 55 ft apart at the maximum distance, and ± 20 ft apart from the driveway flares.

Mr. Jeff Loftus
Page 3

Page 9

September 4, 2023

Above: Looking South on Edwin Ladner Road at Kiln Delisle Road with obscured Stop sign.

Kiln Delisle Road has 1 Eastbound thru lane and 1 Westbound thru lane within 26 ft of asphalt, including 2 ft paved shoulders, and 11 ft travel lanes. The posted speed limit on Kiln Delisle Road is 45 mph in the eastbound direction and 35 mph in the westbound direction as the eastbound and westbound traffic approach both Edwin Ladner Road and Kapalama Drive.

Kapalama Drive has 1 Northbound thru lane and 1 Southbound thru lane within 22 ft of asphalt, which includes 11 ft travel lanes. The posted speed limit on Kapalama Drive is 30 mph in both the southbound and northbound directions. Existing striping displays a center white dashed line, when yellow striping is mandatory for two-way traffic.

Edwin Ladner Road has 1 Northbound thru lane and 1 Southbound thru lane within 22 ft of asphalt, which includes 11 ft travel lanes. The posted speed limit on Edwin Ladner Road is 40 mph in both the southbound and northbound directions. There is a R1-1 Stop sign on Edwin Ladner Road at Kiln Delisle Road. Striping is also faded on Edwin Ladner Road in the vicinity of Kiln Delisle Road.

Above: Looking southwest from Kiln Delisle Road/Edwin Ladner Rd intersection at Neco's XP gas station.

Traffic Counts

Traffic counts were conducted by GRPC at the Kapalama Drive/Kiln Delisle Road intersection and Edwin Ladner Road/Kiln Delisle Road intersection from 6 AM-7 PM on 8/23/23. Kiser Traffic recorded peak hour driveway volumes on 8/3/23. The existing (2023) peak hour traffic volumes are shown in **Figure 2**.

Crash data

Crash data was provided by MDOT from 1/1/16-12/31/22. There were 4 crashes at the Kiln Delisle Road/Edwin Ladner Road intersection and 11 crashes at the Kapalama Drive/Kiln Delisle Road intersection. The crash data is summarized in **Tables 1-3**.

Table 1 – Crashes by Year

Kiln Delisle Road Intersection with	Year							Total
	2016	2017	2018	2019	2020	2021	2022	
EDWIN LADNER ROAD		1		1	1		1	4
KAPALAMA DRIVE	1	2	1			1	6	11
Total	1	3	1	1	1	1	7	15

Source: MDOT, Kiser Traffic and Engineering, LLC, 2023.

With the opening of Neco's XP gas station, there has been a significant increase in crashes at the Kapalama Drive/Kiln Delisle Road intersection.

Table 2 – Crash Type/Injuries

Kiln Delisle Road Crash Type:	Number Injured			Total Injured
	0	1	2	
<u>Kapalama Drive</u>				
Angle	3		3	6
Left turn same roadway		1	1	3

	Subtotal	0	2	2
				4
	Total	0	6	10
				16

Source: MDOT, Kiser Traffic and Engineering, LLC, 2023.

In the reported crashes, there were 12 people injured in Kapalama Drive crashes and 4 injured at Edwin Ladner Road crashes. The majority of the injuries occurred in Angle crashes and left turn same roadway crashes at Kapalama Drive/Kiln Delisle Road.

Table 3 – Crash Type by Year

Kiln Delisle Road Crash Type	Crash Year							Total Crashes
	2016	2017	2018	2019	2020	2021	2022	
Kapalama Drive								
Angle	1	1					2	4
Left turn same roadway							1	1
Overtur		1						1
Rear end slow or stop						1	3	4
Run off Road - Straight		1	0	0				1
Subtotal	1	2	1	0	0	1	6	11
Edwin Ladner Rd								
Angle		1		1				2
Left turn same roadway							1	1
Run off Road - Right					1			1
Subtotal	0	1	0	1	1	0	1	4
Total	1	3	1	1	1	1	7	15

Source: MDOT, Kiser Traffic and Engineering, LLC, 2023.

Other crash data included:

	# Crashes	Percent
Crashes on dry pavement	15	100%
Crashes in daylight/dark	10/5	67%/33%
Alcohol Involved	2	13%
Single Vehicle Crash	3	20%

The crash frequency increased in 2022 from a 6 year average of 1.33 crashes per year to 7 crashes in 1 year.

Traffic Impacts

The intersection delays were evaluated using the information provided in the [Highway Capacity Manual](#) to evaluate the levels-of-service (LOS) for the study intersections. The intersections identified in this analysis include the Kiln Delisle Road/Kapalama Road and Kiln Delisle Road/Edwin Ladner Road. The capacity analysis sheets are provided as an attachment to this letter/report. The capacity analysis results are summarized in Table 4-2023 Existing Traffic.

Table 4 - Year 2023 Existing Traffic - Capacity Analysis Summary

Unsignalized Intersections	Time Period	Critical Movement Level of Service											
		Eastbound			Westbound			Northbound			Southbound		
		Lt	Th	Rt	Lt	Th	Rt	Lt	Th	Rt	Lt	Th	Rt

The existing traffic volumes are shown to be operating at acceptable levels of service.

Signal Warrant Analysis

The Manual on Uniform Traffic Control Devices (MUTCD) outlines the factors for justifying installation of a traffic control signal. Three of the 9 signal warrants are vehicular volume based warrants: 1) eight-hour vehicular volume, 2) four-hour vehicular volume and 3) peak hour. The MUTCD states that a traffic control signal should not be installed unless one or more of the warrants are met. Warrant #1, the eight-hour warrant, is intended for application at locations where a large volume of intersecting traffic is the primary reason to consider installing a traffic control signal. Warrant #2, the four-hour warrant, is intended where the volume of the intersecting traffic is the primary reason to consider installing a traffic control signal. Warrant #3, the peak-hour signal warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.

The hourly traffic volumes at the intersection of Kiln Delisle Road/Edwin Ladner Road and Kiln Delisle Road/Kapalama Drive were compared to the MUTCD threshold volumes for Condition A – Minimum Vehicular Volume and for Condition B-Interruption of Continuous Traffic in Warrant 1, as well as the volume Warrants in #2 and #3. The detail of the hourly volumes and warrant analysis are provided in **Tables 5-7**.

Volumes are in vehicles per hour.

Warrants are based on 70% volume warrant for speeds greater than 40 mph and community with less than 10,000 population, with 1 lane on the major street and 1 lane on the minor. With the minor street right turn volumes, the signal warrant is within 13 vehicles of meeting the 8 hour warrant (1A).

Volumes are in vehicles per hour.

Including the minor street right turn volumes allows the intersection to meet all 3 vehicular volume based warrants.

Sight Triangle

Based on AASHTO's Geometric Design of Highways and Streets, 2018, Intersection Sight Distance and clear sight triangles should be provided. Specified areas along intersection approach legs and across their included corners should be clear of obstructions that might block a driver's view of potentially conflicting vehicles. This distance is measured from (a minimum) of 14.5 ft from the edge of travelled way, from a driver's eye height of 3.5 ft to a height of object of 3.5 ft. *Where practical, it is desirable to increase the distance from the edge of the major-road traveled way to the vertex of the clear sight triangle from 14.5 ft to 18 ft.* (AASHTO, 2018) The posted speed limit is 35 mph westbound on Kiln Delisle Road, so for northbound left turns from Kapalama Drive, with a 45 mph design speed, Intersection Sight Distance (ISD) is 500 ft, which is approximately the distance between Kapalama Drive and Edwin Ladner Road.

There are 2 green signs that are Harrison County signs within this sight triangle that identifies that Hancock County Maintenance ends and you are entering Harrison County. There is also a utility/power pole adjacent to this 14.5 ft sight triangle. Relocating the green signs is recommended to the north side of Kiln Delisle Road to remove this obstruction from the sight triangle. The signs and utility pole are shown in the photo below.

Above: Green signs blocking view of approaching vehicle on Kiln Delisle Road at Kapalama Drive.

Above: Looking south on Edwin Ladner Road at Kiln Delisle Road with obscured Stop sign.

The Stop sign (R1-1) on the right side of the road is recommended to be located such that pole does not obscure sign visibility. The pole is not in the way from some distances, but it does block the view of approaching vehicles from the distance in the photo above. Additionally, minimum mounting height is 5 ft above the edge of pavement, and this sign is mounted just below the 5 ft elevation. A W3-1 (Stop Ahead) sign is recommended on Edwin Ladner Road in advance of the Stop sign at Kiln Delisle Road. Additionally, a second R1-1 Stop sign is recommended to be placed on the left side of Edwin Ladner Road at Kiln Delisle Road.

There are luminaires in the northwest and southeast quadrants of the intersection of Kiln Delisle Road/Edwin Ladner Road providing nighttime illumination of the intersection.

Neco's XP driveways

The width of the existing driveways for Neco's XP are:

- 40 ft at Edwin Ladner Road/Kiln Delisle Road
- 61 ft on Kiln Delisle Road, 130 ft west of Edwin Ladner Road
- 56 ft on Kapalama Drive, 100 ft south of Kiln Delisle Road
- 65 ft on Kapalama Drive, 55 ft south of the north Neco's driveway

Many jurisdictions (including MDOT) have a maximum driveway widths of 50 ft, to minimize the conflict area along the roadway and yet still provide sufficient width for vehicles (including fuel trucks/delivery trucks) to access the site. By providing 3 driveways with widths in excess of 50 ft, the conflict area along both roadways is expanded, and with driveways so close to adjacent intersections, turning traffic in/out of Neco's XP affects both Kapalama Drive and Kiln Delisle Road.

Above: Westbound left turning vehicle on Kiln Delisle Road at Neco's blocking westbound thru vehicles.

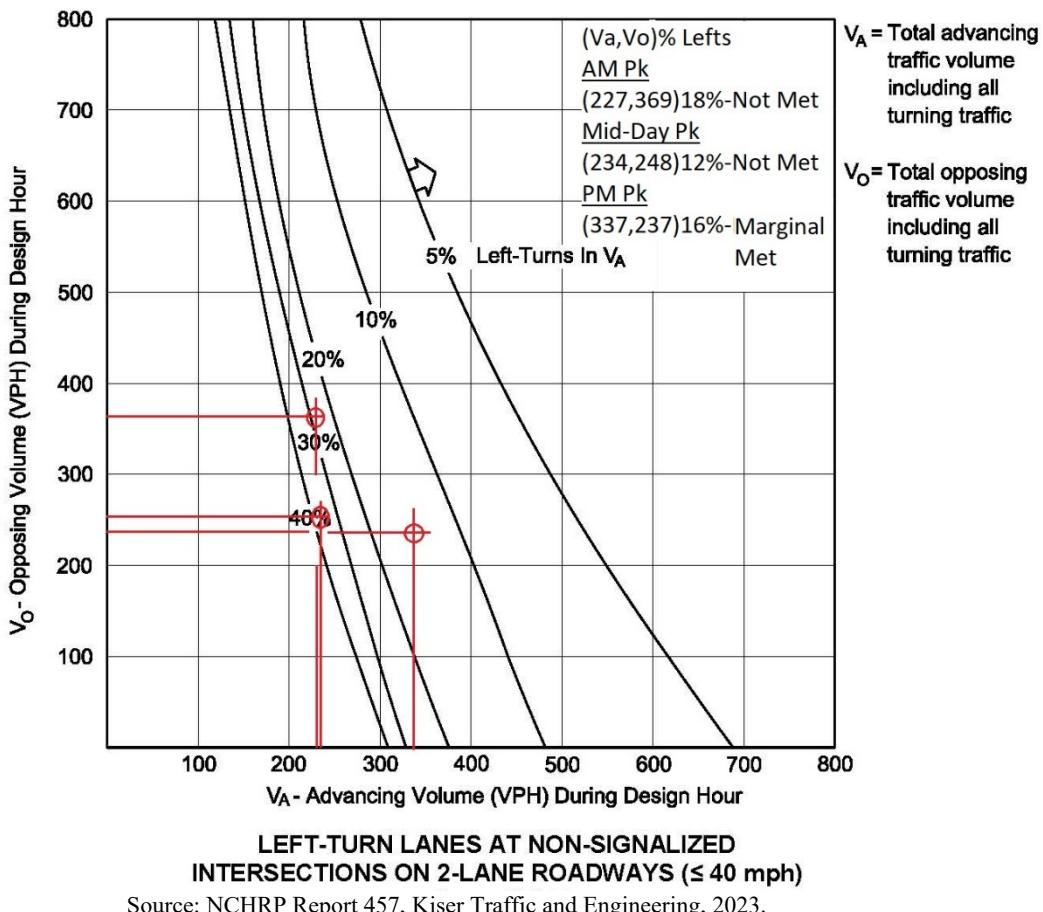

The southbound left turn movement into the north Neco's driveway on Kapalama Drive and westbound left turn from Kiln Delisle Road into the west site driveway (shown above) both affect the adjacent intersection(s) when more than 4 vehicles are in the queue awaiting a gap for the left turning vehicle, causing through traffic to queue across the adjacent intersection.

Auxiliary Turn Lane Warrants

The need for auxiliary left turn/right turn lanes at the project site access driveways on Kiln Delisle Road and Kapalama Drive was evaluated. The NCHRP Report 457 includes graphs for determining if auxiliary left turn lanes/right turn lanes are justified. The left turn lane criteria are based on the volume advancing, percent of left turns in the volume advancing, and the volume opposing. The right turn lane criteria are based on the right turning volume and the total volume advancing/design hour volume. Existing project site driveways were evaluated using the existing traffic volumes and the turn lane graphs.

The right turn volumes counted during peak hours were under 40 vph at each site driveway, thus with an advancing volume of less than 600 vph, a right turn lane is not warranted at any of the site driveways for the data collected.

The left turn volumes were plotted on the graphics provided in the NCHRP Report 457 for *Left-Turn lanes at Non-Signalized Intersections on 2-Lane Roadways* for the west site driveway on Kiln Delisle Road.

The graph identifies that during the PM Peak hour, the left turn lane warrant is met at the existing (western) Neco's Site driveway on Kiln Delisle Road.

Recommendations

The crash frequency has increased in 2022, coinciding with the opening of the Neco's XP gas station. The angle crashes and left turn same roadway crashes resulted in 75% of the injuries reported. Providing dedicated east/west left turn lanes is anticipated to reduce the intersection delays and decrease the angle/left turn crash frequency. Additional R1-1 Stop signs are recommended on the left side of the roadway(s) on Kapalama Drive at Kiln Delisle Road and on Edwin Ladner Road at Kiln Delisle Road. Additionally, a W3-1 Stop Ahead sign is recommended on Edwin Ladner Road for southbound traffic approaching Kiln Delisle Road, along with relocating the existing R1-1 Stop sign so it is not obscured by the utility pole(s) for approaching vehicles, and that the sign is mounted above the minimum mounting height of 5 ft above the adjacent pavement.

The County signs that are in the sight triangle are recommended to be moved from the south side of Kiln Delisle Road to the north side of the road, out of the sight triangle.

The section of Kapalama Drive south of Kiln Delisle Road is recommended to correct the object markers such that the signs are on the appropriate side of the road, and that the visible white centerline stripe is removed where yellow striping belongs between opposing directions of traffic, and a Stop line is provided for northbound traffic at the intersection with Kiln Delisle Road.

Mr. Jeff Loftus
Page 18

September 4, 2023

No signal warrants are not met with existing traffic volumes at the two-way stop controlled intersection of Kapalama Drive/Kiln Delisle Road when excluding the minor street right turn volumes. When including the minor street right turns, the 8-hour, 4-hour and peak hour vehicular volume warrants are met. The levels-of-service are currently at LOS C or better during the AM, Mid-day and PM peak hours. Signalization is not recommended at this time, as the crash history does not meet the crash warrant, and traffic signals typically increase crash frequency.

Auxiliary lane analysis of the Neco's XP identified that a left turn ingress lane is warranted on Kiln Delisle Road at this existing site driveway. The auxiliary left turn lane is recommended to extend between Kapalama Drive and Edwin Ladner Road as a center Two-Way Left Turn Lane (TWLTL), allowing for east/west left turn lanes at both Kapalama Drive, Edwin Ladner Road and Neco's XP driveways on Kiln Delisle Road.

The north approach to the Kiln Delisle Road/Kapalama Drive intersection is recommended to modify the existing driveway to provide a 50 ft maximum width (from the current 115 ft width), aligning with Kapalama Drive to narrow the conflict area for this private driveway. The County is recommended to adopt a maximum driveway width of 50 ft to reduce the conflict potential on adjacent roadways.

Slotted curb is recommended along the centerline of Kapalama Drive extending south of Kiln Delisle Rd to restrict southbound left turns at the north Neco's XP driveway. The prohibition of a southbound left turn at this north driveway would divert these turning vehicles south to the Neco's southern site driveway and increase storage from ±100 ft to more than 200 ft, thus decreasing the potential for southbound vehicles to queue into Kiln Delisle Rd.

In my conversations with local officials and local residents, there had been some concern of cut-through traffic during peak hours through the gas station. On the video that I collected, there were a couple of vehicles that did cut through the gas station parking lot, including one school bus, but the volume of cut through traffic was minimal.

The recommended improvements are shown graphically in **Figure 4**. If you have any questions or comments regarding this analysis, please call me at (601) 720-0262.

Sincerely,

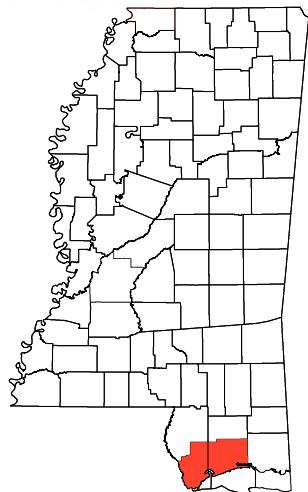

Kiser Traffic and Engineering, LLC

NOTES:

1. Add supplemental R1-1 Stop signs on the left side of the roadway(s) on Kapalama Drive at Kiln Delisle Road and on Edwin Ladner Road at Kiln Delisle Road.
2. Add a W3-1 Stop Ahead sign on Edwin Ladner Road for southbound traffic approaching Kiln Delisle Road.
3. Relocate the existing R1-1 Stop sign on Edwin Ladner Road so it is not obscured by the utility pole(s) for approaching vehicles, and raise the sign to (min) 5 ft above the adjacent pavement.
4. Relocate the County signs that are in the sight triangle from the south side of Kiln Delisle Road to the north side of the road.
5. Replace the incorrect object markers on Kapalama Drive south of Kiln Delisle Road.
6. Obliterate white centerline stripe and replace with yellow striping.
7. Add a Stop line for northbound traffic at the intersection with Kiln Delisle Road.
8. Construct a Two-Way Left Turn Lane (TWLTL) between Kapalama Drive and Edwin Ladner Road, allowing for east/west left turn lanes at both Kapalama Drive, Edwin Ladner Road and Neco's XP driveways on Kiln Delisle Road.
9. The north approach to the Kiln Delisle Road/Kapalama Drive intersection is recommended to modify the driveway to provide a 50 ft maximum width, aligning with Kapalama Drive.
10. Slotted curb is recommended along the centerline of Kapalama Drive extending south of Kiln Delisle Rd to restrict southbound left turns at the north Neco's XP north driveway.
